

The 8<sup>th</sup> edition of the **REMTECH**, the most specialized event in Italy dedicated to contaminated sites remediation and territory requalification, was held in the Ferrara exhibition centre between 17-19 September 2014.

**Spea Ingegneria Europea S.p.A.** also played a leading role in the event as member of the OICE delegation along with other important companies operating in the sector.

Spea took part over all three days of the event's initiatives and encounters from its dedicated exhibition stand. Showcasing the company's experience and professional know-how in the planning, management and monitoring of underground works both in Italy and overseas, in-house representatives welcomed numerous visitors to their exhibition space which was received with interest and enthusiasm.

REMTECH offered a very qualified exhibition area, a high-level technical and scientific conference session, and permanent training

courses for operators, authorities and decision makers.

**Spea Ingegneria Europea S.p.A.** gave a presentation during the workshop *Emergency remediation on the occasion of the construction of major infrastructures*, where Eng. Fabio Occulti presented the results of some significant experience in the field of the environment acquired as part of business operations, describing the environmental monitoring of large-scale infrastructure and quality analysis of the excavated soil into underground works.
